Angel Vierra is a homicide cop who never gives up on a case until the cuffs are on or the perp is dead. He tracked the Bible in Blood serial killer and arrested her after she shot him. He also solved the Winter Kill case that ended in a shootout with the psycho killer. When two elected county sheriffs are murdered, he is sent to the water-winter wonderland of northern Michigan. Vierra quickly discovers that his killer is Manny Modelo, the regional sales manager for the Sina Loa drug cartel. His partner Adrienne Kincaid is a War-on-Terror vet who ably assists in the investigation. However, Modelo has Kincaid in his sights and is set on eliminating her. Jack Thorn, the

Toronto Blue Jay's ace left handed pitcher, is the wild card. Thorn has his own reasons to eliminate Modelo and his own special ops talents. Thorn also has some powerful friends on his side, including a svelte and savvy NYPD detective. The question becomes: who will find the killer first? Critical praise for Sam Fluharty's first novel, Rite of Revenge: . . . Fluharty, a former Vietnam pilot, puts his flight experience to good use in this novel, and also showcases an authority on police techniques and procedure. The story is briskly paced, and the narrative remains central without disappearing behind extraneous information. An uneven romantic thriller that will appeal to genre fans (Kirkus Reviews of New York). Sam Fluharty flew a gunship in Vietnam and earned the Distinguished Flying Cross for Valor and the Purple Heart. He earned a law degree, and life got boring. Angel Vierra is Harry Bosch, Lucas Davenport and Billy Graves and of course, Sam Fluharty. Try to keep up with him!

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

National Book Award Finalist: "This man's ideas may be the most influential, not to say controversial, of the second half of the twentieth century."—Columbus Dispatch At the heart of this classic, seminal book is Julian Jaynes's still-controversial thesis that human consciousness did not begin far back in animal evolution but instead is a learned process that came about only three thousand years ago and is still developing. The implications of this revolutionary scientific paradigm extend into virtually every aspect of our

psychology, our history and culture, our religion—and indeed our future. "Don't be put off by the academic title of Julian Jaynes's *The Origin of Consciousness in the Breakdown of the Bicameral Mind*. Its prose is always lucid and often lyrical...he unfolds his case with the utmost intellectual rigor."—The New York Times "When Julian Jaynes . . . speculates that until late in the twentieth millennium BC men had no consciousness but were automatically obeying the voices of the gods, we are astounded but compelled to follow this remarkable thesis."—John Updike, *The New Yorker* "He is as startling as Freud was in *The Interpretation of Dreams*, and Jaynes is equally as adept at forcing a new view of known human behavior."—*American Journal of Psychiatry*
