The Music History Classroom brings together essays written by recognized and experienced teachers to assist in the design, implementation, and revision of college-level music history courses. This includes the traditional music history survey for music majors, but the materials presented here are applicable to other music history courses for music majors and general education students alike, including period classes, composer or repertory courses, and special topics classes and seminars. The authors bring current thought on the scholarship of teaching and learning together with practical experience into the unique environment of the music history classroom. While many of the issues confronting teachers in other disciplines are pertinent to music history classes, this collection addresses the unique nature of musical materials and the challenges involved in negotiating between historical information, complex technical musical issues, and the aesthetics of performing and listening. This single volume provides a systematic outline of practical teaching advice on all facets of music history pedagogy, including course design, classroom technology, listening and writing assignments, and more. The Music History Classroom presents the 'nuts-and-bolts' of teaching music history suitable for graduate students, junior faculty, and seasoned teachers alike.

This book reflects the move in Human Computer Interaction studies from standard usability

concerns towards a wider set of problems to do with fun, enjoyment, aesthetics and the experience of use. Traditionally HCI has been concerned with work and task based applications but as digital technologies proliferate in the home fun becomes an important issue. There is an established body of knowledge and a range of techniques and methods for making products and interfaces usable, but far less is known about how to make them enjoyable. Perhaps in the future there will be a body of knowledge and a set of techniques for assessing the pleasure of interaction that will be as thorough as those that currently assess usability. This book is a first step towards that. It brings together a range of researchers from academia and industry to provide answers. Contributors include Alan Dix, Jacob Nielsen and Mary Beth Rosson as well as a number of other researchers from academia and industry.

The main purpose of the book is to explore basic music theory so thoroughly that the interested student will then be able to easily pick up whatever further theory is wanted. Music history and the physics of sound are included to the extent that they shed light on music theory. The main premise of this course is that a better understanding of where the basics come from will lead to better and faster comprehension of more complex ideas. It also helps to remember, however, that music theory is a bit like grammar.
