In this companion text to *Analog Circuit Design: Art, Science, and Personalities*, seventeen contributors present more tutorial, historical, and editorial viewpoints on subjects related to analog circuit design. By presenting divergent methods and views of people who have achieved some measure of success in their field, the book encourages readers to develop their own approach to design. In addition, the essays and anecdotes give some constructive guidance in areas not usually covered in engineering courses, such as marketing and career development. \*Includes visualizing operation of analog circuits

\*Describes troubleshooting for optimum circuit performance

\*Demonstrates how to produce a saleable product

Flying insects are intelligent micromachines capable of exquisite maneuvers in unpredictable environments. Understanding these systems advances our knowledge of flight control, sensor suites, and unsteady aerodynamics, which is of crucial interest to engineers developing intelligent flying robots or micro air vehicles (MAVs). The insights we gain when synthesizing bioinspired systems can in turn benefit the fields of neurophysiology, ethology and zoology by providing real-life tests of the proposed models. This book was written by biologists and engineers leading the research in this crossdisciplinary field. It examines all aspects of the mechanics, technology and intelligence of insects and insectoids. After introductory-level overviews of flight control in insects, dedicated chapters focus on the development of autonomous flying systems using biological principles to sense their surroundings and autonomously navigate. A significant part of the book is dedicated to the mechanics and control of flapping wings both in insects and

artificial systems. Finally hybrid locomotion, energy harvesting and manufacturing of small flying robots are covered. A particular feature of the book is the depth on realization topics such as control engineering, electronics, mechanics, optics, robotics and manufacturing. This book will be of interest to academic and industrial researchers engaged with theory and engineering in the domains of aerial robotics, artificial intelligence, and entomology.

Times of the Technoculture explores the social and cultural impact of new technologies, tracing the origins of the information society from the coming of the machine with the industrial revolution to the development of mass production techniques in the early twentieth century. The authors look at how the military has controlled the development of the information society, and consider the centrality of education in government attempts to create a knowledge society. Engaging in contemporary debates surrounding the internet, Robins and Webster question whether it can really offer us a new world of virtual communities, and suggest more radical alternatives to the corporate agenda of contemporary technologies.

This book covers the technology of inspection of metals, the main emphasis on final part inspection at the manufacturing

facility or on receipt at the user's facility. The unique feature of this book is that it provides an intermediate level introduction to the different methods used to inspect metals and finished parts and a more detailed review of the specific inspection methods for important metal product forms.

The book is divided into two parts: Part I gives the basics of the most important methods used for inspection and testing, while Part II covers the types of methods used to inspect different classes of metallic parts. The advantages and limitations of each method are discussed, including when other methods may be warranted. In particular, the chapters on specific product forms (e.g., castings) compare the different inspection methods and why they are used.

With globalisation, deregulation and the advent of derivatives, credit institutions and the treasury operations of manufacturing, merchandising and service companies are finding that their traditional tools for management control no longer suffice. They must develop more efficient processes able to measure and monitor their risks in real-time. Internal control is a dynamic system covering all types of risk, addressing fraud, assuring transparency and making possible reliable financial reporting within such organisations. In *Implementing and Auditing the Internal Control System*, Dimitris N. Chorafas defines both auditing and internal control, and explains the value of internal control, why it must be audited, and how it can be most effectively achieved. He addresses top management's accountability

for internal control, and uses case studies to demonstrate the application of such systems, and the importance of sound and well-informed analysis of the information gathered. Internal control systems are examined within the context of the globalization of financial markets, under the impact of the growth of information technology, and from the viewpoint of new regulations by supervisory authorities in Group of Ten countries as well as by the Basle Committee on Banking Supervision. Based on an extensive research project in the UK, US, Germany, France, Austria, Switzerland and Sweden, this book is an invaluable source of practical advice for implementing internal control systems, and making existing systems more efficient. It provides managers and professionals with guidelines for the interpretation and use of the resulting internal control intelligence.

*Early Buddhist Metaphysics* provides a philosophical account of the major doctrinal shift in the history of early Theravada tradition in India: the transition from the earliest stratum of Buddhist thought to the systematic and allegedly scholastic philosophy of the Pali Abhidhamma movement. Entwining comparative philosophy and Buddhology, the author probes the Abhidhamma's metaphysical transition in terms of the Aristotelian tradition and vis-à-vis modern philosophy, exploits Western philosophical literature from Plato to contemporary texts in the fields of philosophy of mind and cultural criticism.

Anthropologists have long sought to engage and describe foreign or "alien" societies, yet few have considered the fluid communities centered around a shared belief in alien beings and UFO sightings and their effect on popular and expressive culture. Opening up a new frontier for anthropological study, the contributors to *E.T. Culture* take these communities seriously. They demonstrate that an E.T. orientation toward various forms of visitation—including

alien beings, alien technologies, and uncanny visions—engages primary concepts underpinning anthropological research: host and visitor, home and away, subjectivity and objectivity. Taking the point of view of those who commit to sci-fi as sci-fact, contributors to this volume show how discussions and representations of otherworldly beings express concerns about racial and ethnic differences, the anxieties and fascination associated with modern technologies, and alienation from the inner workings of government. Drawing on social science, science studies, linguistics, popular and expressive culture, and social and intellectual history, the writers of *E.T. Culture* unsettle the boundaries of science, magic, and religion as well as those of technological and human agency. They consider the ways that sufferers of "unmarked" diseases such as Chronic Fatigue Syndrome come to feel alien to both the "healthy" world and the medical community incapable of treating them; the development of alien languages like Klingon; attempts to formulate a communications technology—such as that created for the spaceship Voyager—that will reach alien beings; the pilgrimage spirit of UFO seekers; the out-of-time experiences of Nobel scientists; the embrace of the alien within Japanese animation and fan culture; and the physical spirituality of the Raëlian religious network. This widely acclaimed book, first published in 1974, was a classic from its first day in print. Written in a direct, inviting way by Harry Braverman, whose years as an industrial worker gave him rich personal insight into work, Labor and Monopoly Capital overturned the reigning ideologies of academic sociology. This new edition features an introduction by John Bellamy Foster that sets the work in historical and theoretical context, as well as two rare articles by Braverman, "The Degradation of Work in the Twentieth Century" (1975) and "Two Comments" (1976), that add much to our understanding of the book.
