Analytical Chemistry, Volume 24: The Analytical  
Chemistry of the Noble Metals describes the  
procedures for the separation, extraction, and  
analysis of noble metals. This book is composed of  
seven chapters, and begins with a survey on the  
influence of metallurgical factors on the  
susceptibility of platinum and gold metals to  
various corrosive agents. The succeeding chapter  
provides the methods of isolation of osmium and  
ruthenium from associated platinum metals and from  
base metals. A chapter examines the application of  
gravimetric methods for the separation of seven  
noble metals, including ruthenium, osmium, rhodium,  
iridium, palladium, platinum, and gold. Other  
chapters consider the procedures for volumetric,  
spectrophotometric, and spectrochemical analysis of  
noble metals. The concluding chapter describes the  
features and attributes of the equipment for noble  
metal analysis. This book is of value to analytical  
chemists and workers and researchers in metallurgy.

The eleventh edition was carefully reviewed with an eye toward strengthening the content available in OWLv2, end-of-chapter questions, and updating the presentation. Nomenclature changes and the adoption of IUPAC periodic table conventions are highlights of the narrative revisions, along with changes to the discussion of d orbitals. In-text examples have been reformatted to facilitate learning, and the accompanying Interactive Examples in OWLv2 have been redesigned to better parallel the problem-solving approach in the narrative. New Capstone Problems have been added to a number of chapters. Soon to be banned in Beijing, this work suggests that Lin Zexu, often called the first modern Chinese nationalist, popular icon for present-day prohibitionists, who legend says caused the first Opium War (1839-1842) by destroying some 20,000 chests of British opium, may deserve a second look from historians. His method of using lime and salt to "destroy" the opium simply shares too many parallels with European methods for extracting morphine from opium. Morphine salts were sold in both China and Europe in the 19th century as substitutes for opium or as opium "cures". Could the mandarin Lin Zexu have stolen from the British, conned the Americans, hastened the downfall of the parasitical Manchu dynasty, and manufactured a simple morphine salt? -- Graffii Milante, Valpaaiso, Chile --from book cover.
